ANANT GOEL

Computer Vision / Applied AI Intern

anantgoel2005@gmail.com | India

builtbyanant.site | github.com/Anantgoel2005 | linkedin.com/in/ag25goel

PROFESSIONAL SUMMARY

Final-year Computer Science student focused on computer vision and the engineering around it: video pipelines, persistent tracking, calibrated geometry, APIs, dashboards, and reproducible validation.

EDUCATION

BML Munjal University | B.Tech in Computer Science | Expected May 2027

TECHNICAL SKILLS

Languages: Python, TypeScript

Computer vision: OpenCV, YOLO, ByteTrack, calibrated geometry

Backend & interfaces: FastAPI, React, Next.js

Tools & practices: Docker, automated tests, GitHub Actions, telemetry

PROJECTS

PathWise | Python, YOLO, ByteTrack, OpenCV

- Built a road-risk pipeline with persistent vehicle tracking, calibrated road-plane projection, and explainable time-to-collision and cut-in rules.
- Validated a six-second synthetic reference scenario containing 180 frames and 540 actor samples; demo outputs are not real-world perception-accuracy claims.

Traffic Intelligence | Python, YOLO, ByteTrack, React

- Connected road-activity detection and persistent tracking to incident recording and operational telemetry.
- Built a React dashboard to make traffic analytics and recorded incidents inspectable in one workflow.

Deception Orchestrator | Python, FastAPI, Next.js, Docker

- Developed a self-hostable analyst console that turns honeypot and URL-canary events into MITRE ATT&CK-tagged investigations.
- Connected a FastAPI control plane to a Next.js workspace, with Docker deployment and automated backend tests and frontend builds.

ADDITIONAL INFORMATION

Seeking on-site / hybrid internships in India. Flexible duration; start date to be discussed.
